

Samantha Kellow

AI Product Engineer · London, UK · hello@sammii.dev · 07454267667
Portfolio: sammii.dev · github.com/sammii-hk · linkedin.com/in/sammii

SUMMARY

AI product engineer and design engineer who builds AI-native products end to end: the agent systems and LLM tooling, and the interface that makes them usable. Ships full-stack TypeScript products with real users, autonomous multi-agent pipelines and MCP servers, with the design craft to make them feel fast and considered. Runs a fourteen-agent content pipeline with per-agent cost tracking, a live product on the Vercel AI SDK with its own MCP server, and a published MCP scaffolder. Coding agents are daily tools; the accountability for what they produce stays with me.

EXPERIENCE

Founding Design Engineer, Garden Computing

2025 to 2026 · React, TypeScript, Component Libraries, Design Systems, Figma, Claude API

- Built a component library and design system from scratch: shared primitives, design tokens, and a Radix-based headless component layer.
- Operated across design and engineering simultaneously, owning brand, marketing, and component architecture in a team where these would typically be split across multiple hires.

Senior Front-End Engineer, bots

2024 to 2025 · React, TypeScript, DataDog, Highcharts, LaunchDarkly

- Led feature development from concept to launch, managing scope and delivery.
- Designed and built the product's search and analytics layers in collaboration with founders.
- Built data-driven dashboards and interactive reporting tools used by leadership and customers.

Web Engineer, ASOS

2022 to 2024 · React, TypeScript, Storybook, Kubernetes, AKS, TeamCity

- Built a date-based seasonal theming system that eliminated campaign prep entirely: themes activate and deactivate automatically, removing the need for manual release cycles across the site.
- Managed production releases and strengthened documentation and onboarding for engineering teams.

Full-Stack Engineer, Rare: Group

2020 to 2022 · Vue, JavaScript, TypeScript, SQL, Jest

- Implemented an Atomic Design System unifying UI and UX across products.
- Delivered internal dashboards and tools used across client teams.

SELECTED PROJECTS

Orbit · TypeScript, Bash, Claude API, Playwright, MCP, Windmill. Autonomous fourteen-agent content pipeline on 21 Windmill schedules: each agent scoped to its own MCP config, checkpoint and resume, per-agent cost tracking, and A/B infrastructure that auto-promotes winners at 80%+ confidence.

Lunary (lunary.app) · Next.js, TypeScript, astronomy-engine, Stripe, Prisma, PostgreSQL. Live subscription PWA with paying subscribers, shipped and operated solo: real-time planetary positions (astronomy-engine, VSOP87), birth charts, synastry with 36 computed aspects, Stripe billing, and an MCP server exposing product data and tools to agents. Built on the Vercel AI SDK.

create-mcp-server · Node.js, TypeScript, tsup. Published npm CLI: `npx create-mcp-server` bootstraps a fully typed Model Context Protocol server with tool definitions, resource handlers and build config.

Spellcast (spellcast.sammii.dev) · Next.js, TypeScript, PostgreSQL, Prisma, MCP. Full-stack social media management platform: multi-account scheduling, campaigns, autopilot content generation, A/B testing with statistical confidence scoring, brand voice, analytics and engagement across six or more platforms.

Isle · TypeScript, VS Code Extension API, Canvas API. VS Code extension visualising coding agents as pixel-art characters in the editor, a feedback layer over agentic sessions. Published to the VS Code marketplace.

Flip · Next.js, Prisma, PostgreSQL, TypeScript, Zod. Self-hosted feature flag and A/B testing service with a statistical significance engine: impressions, conversions, p-values, confidence intervals and automatic winners.

SKILLS

AI and agents: Claude API, Vercel AI SDK, MCP servers, multi-agent pipelines, Playwright, Windmill, GPT-4 APIs, cost tracking and observability, prompt and eval design

Front-end: React, Next.js, TypeScript, TailwindCSS, Storybook, Zustand, Vercel, accessibility, performance

Back-end and APIs: Node.js, REST APIs, Prisma, PostgreSQL, SQL, Temporal, edge middleware, WebSockets

Design systems: Component libraries, Design tokens, Accessibility, Documentation, Shadcn, Radix UI

Tooling: Vite, Cypress, Jest, GitHub Actions, Docker, Kubernetes, CI/CD

EDUCATION

MA (Merit) Visual Communication and BA (Hons) Graphic Design, Southampton Solent University
