

Samantha Kellow

Product Engineer · London, UK · hello@sammii.dev · 07454267667

Portfolio: sammii.dev · github.com/sammii-hk · linkedin.com/in/sammii

SUMMARY

Product engineer who takes complicated ideas from prototype to production and keeps them running: full-stack TypeScript products with real users, the data and billing layers behind them, and the interface on top. Built and operate Lunary (live, paying subscribers) and Spellcast (multi-platform publishing) solo, from Stripe and Postgres to the pixel. Component libraries and design systems at Garden Computing and ASOS; search, analytics and dashboards at bots. Design background, so the last ten percent gets finished.

EXPERIENCE

Founding Design Engineer, Garden Computing

2025 to 2026 · React, TypeScript, Component Libraries, Design Systems, Figma, Claude API

- Built a component library and design system from scratch: shared primitives, design tokens, and a Radix-based headless component layer.
- Operated across design and engineering simultaneously, owning brand, marketing, and component architecture in a team where these would typically be split across multiple hires.

Senior Front-End Engineer, bots

2024 to 2025 · React, TypeScript, DataDog, Highcharts, LaunchDarkly

- Led feature development from concept to launch, managing scope and delivery.
- Designed and built the product's search and analytics layers in collaboration with founders.
- Built the demo-quality product that directly enabled the company's expansion into the Asia market, opening an entirely new region that had previously been untouched.

Web Engineer, ASOS

2022 to 2024 · React, TypeScript, Storybook, Kubernetes, AKS, TeamCity

- Built a date-based seasonal theming system that eliminated campaign prep entirely: themes activate and deactivate automatically, removing the need for manual release cycles across the site.
- Managed production releases and strengthened documentation and onboarding for engineering teams.
- Built a reusable typography system within the component library.

Full-Stack Engineer, Rare: Group

2020 to 2022 · Vue, JavaScript, TypeScript, SQL, Jest

- Implemented an Atomic Design System unifying UI and UX across products.
- Delivered internal dashboards and tools used across client teams.
- Led the full company rebrand from visual direction to front-end implementation.

SELECTED PROJECTS

Lunary (lunary.app) · Next.js, TypeScript, astronomy-engine, Stripe, Prisma, PostgreSQL. Live subscription PWA with paying subscribers, shipped and operated solo: real-time planetary positions (astronomy-engine, VSOP87), birth charts, synastry with 36 computed aspects, Stripe billing, and an MCP server exposing product data and tools to agents. Built on the Vercel AI SDK.

Spellcast (spellcast.sammii.dev) · Next.js, TypeScript, PostgreSQL, Prisma, MCP. Full-stack social media management platform: multi-account scheduling, campaigns, autopilot content generation, A/B testing with statistical confidence scoring, brand voice, analytics and engagement across six or more platforms.

Lattiq (lattiq.sammii.dev) · Next.js, Lexical, Yjs, WebSockets, TypeScript. Local-first collaborative rich-text editor on Lexical with Yjs CRDT syncing over WebSockets: conflict-free merging whatever the connection state.

Flip · Next.js, Prisma, PostgreSQL, TypeScript, Zod. Self-hosted feature flag and A/B testing service with a statistical significance engine: impressions, conversions, p-values, confidence intervals and automatic winners.

Glint · Next.js, Edge Middleware, PostgreSQL, Recharts. Edge-first analytics on Edge Middleware: traffic captured at the request with zero client latency, PostgreSQL persistence, live Recharts dashboard and automated background jobs.

ScapeStudio · Next.js, TypeScript, Web Workers, Canvas 2D, Zustand, JSZip. Browser photo editor for fine-art print prep: non-destructive grayscale pipeline, curves and crop computed off-thread in Web Workers, ZIP export with no server round-trip.

SKILLS

Front-end: React, Next.js, TypeScript, TailwindCSS, Storybook, Zustand, Vercel, accessibility, performance

Back-end and APIs: Node.js, REST APIs, Prisma, PostgreSQL, SQL, MongoDB, Stripe, Temporal, edge middleware, WebSockets

AI and agents: Claude API, Vercel AI SDK, MCP servers, multi-agent pipelines, A/B testing infrastructure

Design systems: Component libraries, Design tokens, Accessibility, Documentation, Shadcn, Radix UI

Tooling: Vite, Cypress, Jest, GitHub Actions, Docker, Kubernetes, CI/CD

EDUCATION

MA (Merit) Visual Communication and BA (Hons) Graphic Design, Southampton Solent University
